## Methods

### 2.1 Figures

An example is Figure 2.1

Figure 2.1: A landslide.

## 2.2 Tables

An example is Table 2.1

| <b>Model</b>   | <b>Accuracy</b> |
|----------------|-----------------|
| regression     | 90%             |
| random forests | 95%             |

Table 2.1: A random table.

## 2.3 Equations

Equations can be inserted in the text itself, working in the *mathmode*(put text between  $\$$ -signs, for example  $Y_i = \frac{1}{x}$ ). Or put them in the text as a numbered floating element (e.g. Equation (2.1)).

$$y = \frac{1}{x} \tag{2.1}$$

$$y = \int_a^b x^2 dx \tag{2.2}$$

$$y = \sum_{i=1}^n x_i^2 \tag{2.3}$$

You can align the equations:

$$y = \frac{1}{x} \tag{2.4}$$

$$y = \int_a^b x^2 dx \tag{2.5}$$

$$y = \sum_{i=1}^n x_i^2 \tag{2.6}$$

## Results

### 3.1 res 1

Example of a citation (Vapnik, 1995; Broeckx et al., 2018). Or a citation you can not see. Reichenbach et al. (2018) illustrate a third way of referencing.

#### subres 1

I show  $\pi$  as a glossary element here.  $\alpha$

#### subres 2

First time, acronyms are written fully, like landslide susceptibility (LSS), second time they are abbreviated like this: LSS
